GENERAL INFORMATION

MMV at a Glance

The visionary founder, of BHU, Mahamana Pandit Madan Mohan Malviya foresaw immense significance of women's education and the critical role women would have to play in the development of the country and he established Mahila Mahavidyalaya (MMV) in 1929 as an integral Unit of BHU. MMV, BHU is a landmark in history of women's education in the Northern India. It is one of the first institutions to champion the cause of women's empowerment through education. It has produced students who went on to distinguish themselves in various fields. Mahila Mahavidyalaya has concerned itself not only with the academic facet of women's education but also with developing socio-political awareness and a sense of responsibility in its students. This institution was a significant site for the freedom struggle movement with students inspired and fired with extraordinary zeal.

Theme of Conference

Interdisciplinary research is the need of today's scientific community. Effective utilization of different available tools is necessary for in depth analysis of the materials. Present conference is to give a "summary in detail" of different tools available for material characterization. This will be a special conference where speakers will be requested to teach the details of available tools and intricacy of data interpretation. It is anticipated that in this conference younger scientists will, in particular, be benefited by enriching their knowledge provided by eminent scientists. This may also be a platform to start interdisciplinary research.

Contributed papers will be included as poster presentation so that young scientists could present and share their views with each other and with eminent scientists.

The conference will address the whole family of material scientist i.e. physicist, chemist, material scientist and scientists from other disciplines like metallurgy, chemical engineering, device technology including life science & medical science.
